

ISA CERTIFIED PERSONAL TRAINER COURSE

WEEK 2 – PT SOFT SKILLS AND ACE IFT MODEL

- CHAPTER 2
(THE ACE INTEGRATED FITNESS TRAINING
MODEL)
- CHAPTER 3
(BASICS OF BEHAVIOUR CHANGE)
- CHAPTER 4
(EFFECTIVE COMMUNICATION, GOAL SETTING
AND TEACHING TECHNIQUES)

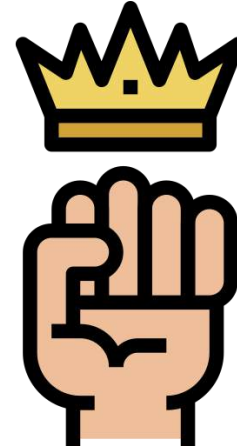

CHAPTER 3

BASICS OF BEHAVIOR CHANGE

CONTENT COVERED

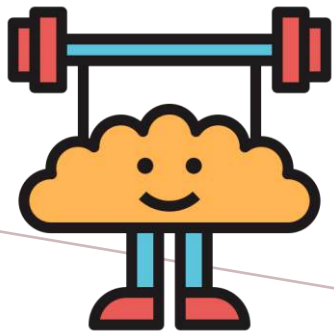

Health Belief Model (Pg 62)

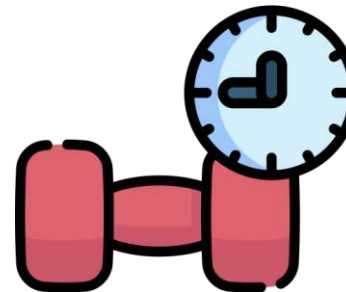

Self Determination Theory (Pg 64)

Transtheoretical Model of Behaviour Change
– Stages of Change, Processes of Change,
Self Efficacy and Decisional Balance (Pg 69)

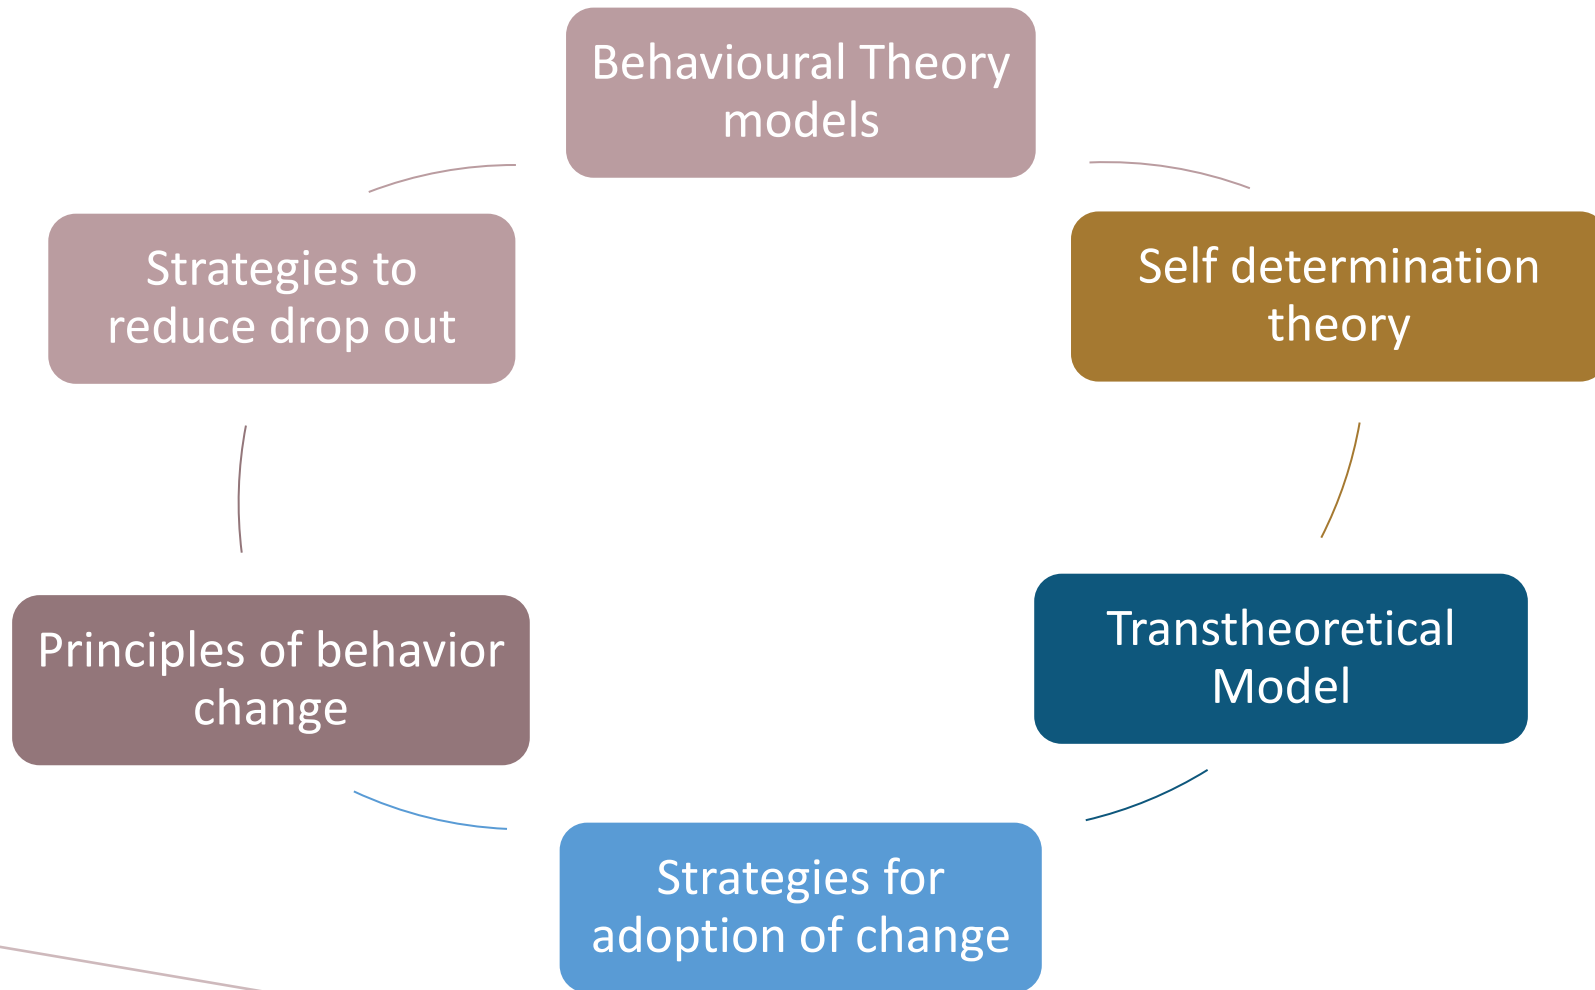

The 4 Principles of Behavioural
Change – Operant Conditioning,
Cognitions and Behaviour, Goal
Setting and Self Monitoring (Pg 82)

Physical Activity and Adherence –
Personal Attributes, Environmental
Factors and Physical Activity Factors
(Pg 87-91)

WHY UNDERSTANDING BEHAVIOURAL CHANGE IS IMPORTANT

HEALTH BELIEF MODEL

[PG 62]

Why would people want to go into an exercise program?

Figure 3-1: The health belief model

SELF DETERMINATION THEORY

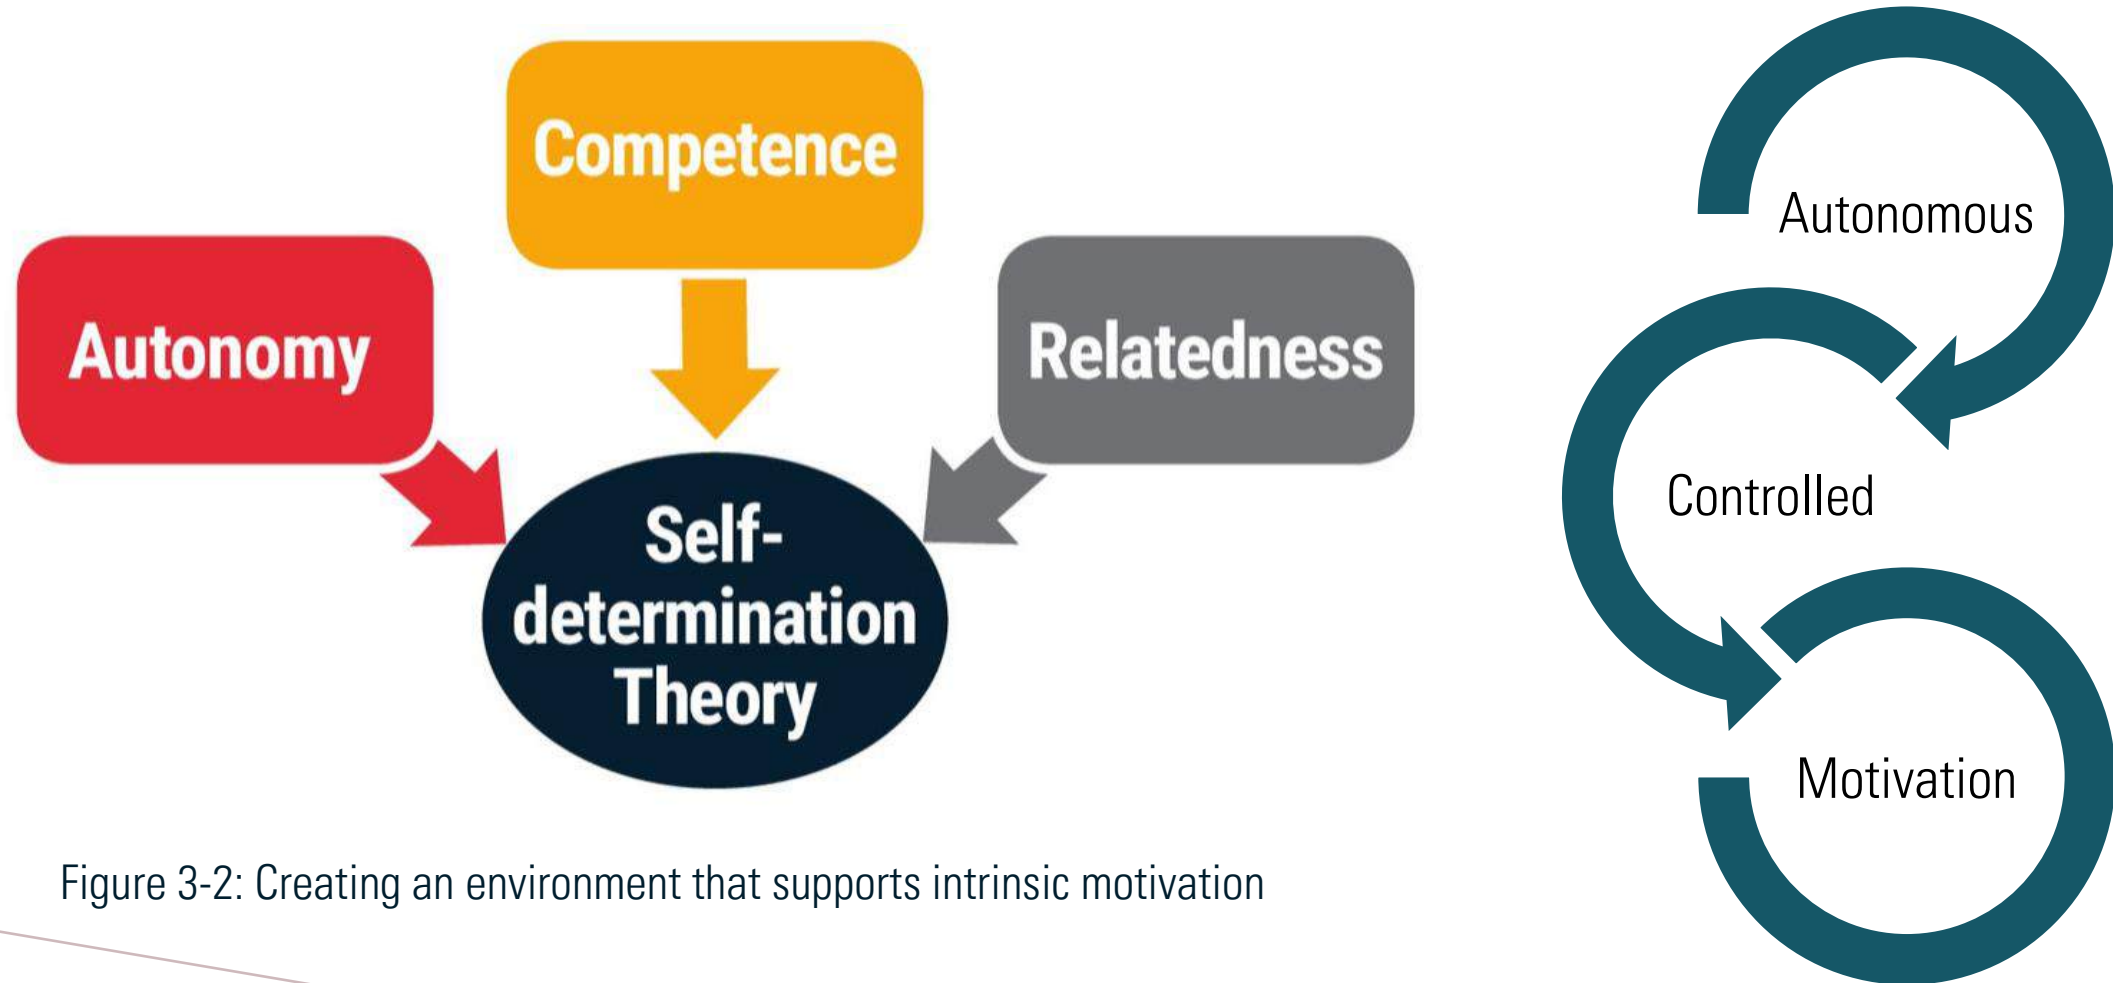

Figure 3-2: Creating an environment that supports intrinsic motivation

SELF DETERMINATION THEORY

Figure 3-2: Creating an environment that supports intrinsic motivation

TRANSTHEORETICAL MODEL (TTM) OF BEHAVIOUR CHANGE

4 Components of TTM Model:

Stages of Change

Precontemplation, Contemplation, Preparation, Action and Maintenance

Processes of Change

Stimulus Control, Counter Conditioning, Reinforcement and Cognitions & Behaviour

Self Efficacy

Past Performance, Vicarious Experience, Verbal Persuasion, Physiological State Appraisals, Emotional State and Mood, Imaginal Experiences

Decisional Balance

Motivational Interviewing

TTM – STAGES OF CHANGE

[PG 71]

Stage	Traits	Goals	Strategies
Precontemplation	Unaware and don't think it can be solved	Increase awareness on benefits of a change	• Explore clients personal value • Use general sources to increase awareness
Contemplation	Aware of problem but little understanding	Support cues to action Provide structured guidance upon their request	• Validate decision to change is theirs • Evaluate pros and cons of making a change
Preparation	Seeking opportunity to engage target behavior	Co-create an action plan	• Encourage small steps toward self efficacy • Identify social support
Action	Desire for opportunities to maintain activity	Establish new behaviour as habit	• Increase awareness of lapses • Support clients to solidify social support as long term and establish accountability and self monitoring
Maintenance	Empowered, Desire to maintain adherence	Avoid burnout or boredom	• Re-evaluate current change strategies • Plan for relapses and reinforce internal rewards

Table 3-1: The Stages of Behavioural Change

TTM – STAGES OF CHANGE (CON'T)

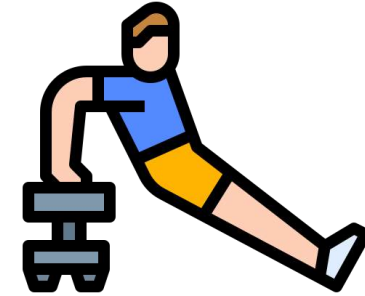

[PG 71]

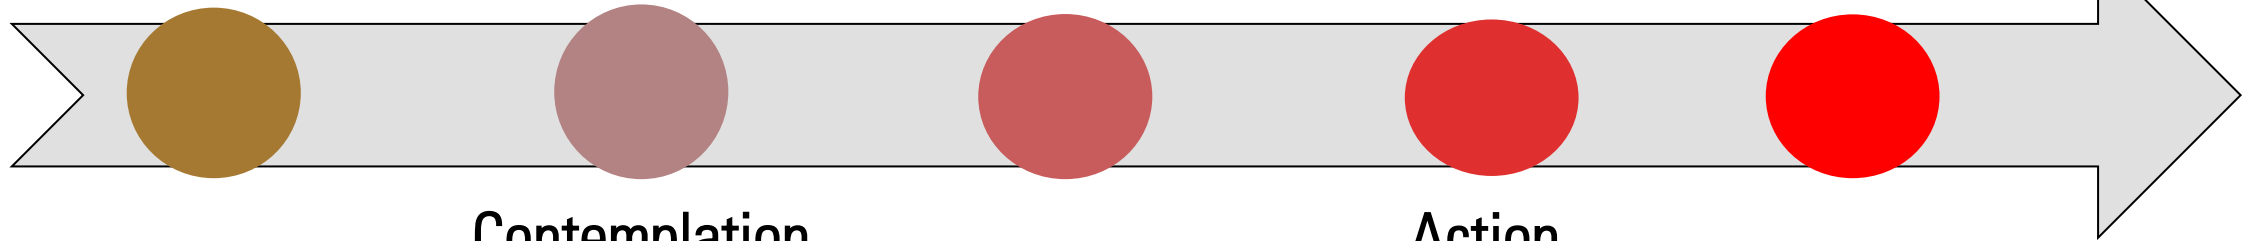

Precontemplation

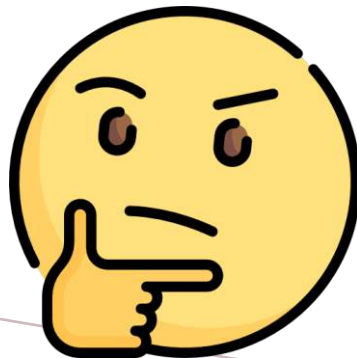

Preparation

Maintenance

Contemplation

Action

TTM – PROCESSES OF CHANGE

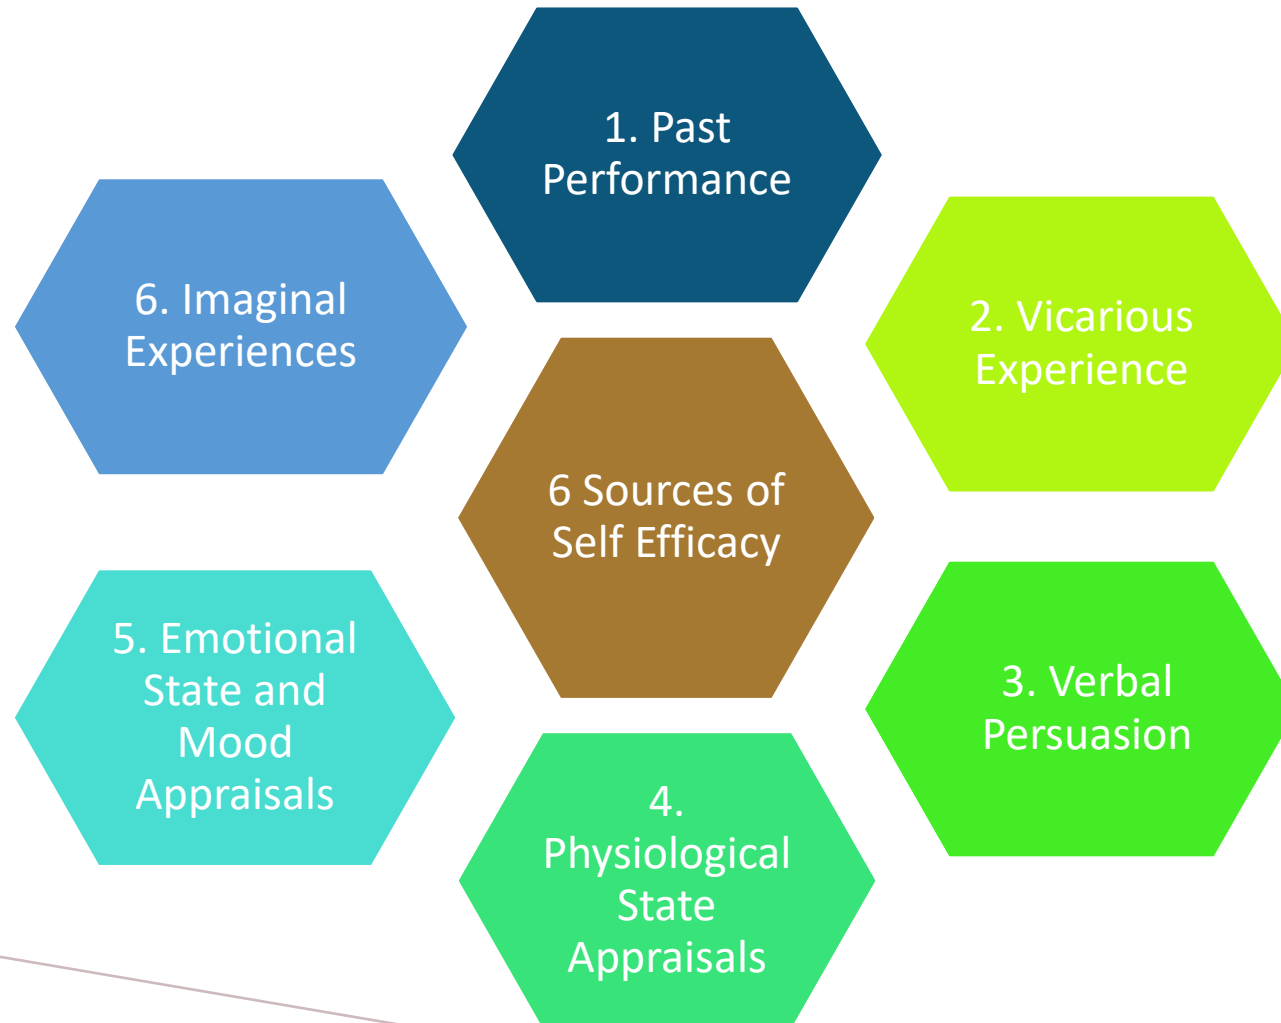

[PG 73]

Table 3-2: Processes of Change

Category	Processes	Description / Example
Cognitive/Experiential	Consciousness Raising	Learning new tips to support healthy behaviour change
	Dramatic Relief	Experiencing negative emotions caused by the negative behavior, then feel relief from deciding to change
	Environmental Re-evaluation	Realizing how your behavior influences the environment, esp. social environment
	Self Re-evaluation	Realizing behavior change is an important part of one's identity as a person
	Social Liberation	Taking opportunity to be with people who model the new behavior; noticing social norms/recourses that reinforce the new behavior
Behavior	Self Liberation (commit)	Deciding to change and experiencing a new belief in one's ability to change
	Helping Relationships (find support)	Trusting, accepting and utilizing social support from caring ones
	Counter Conditioning (substitute)	Substitute healthier behaviours & cognitions for unhealthy behaviour
	Stimulus Control (re-engineer)	Setting reminds for healthy behaviour e.g keep gym bag in office
	Reinforcement Management (reward)	Increasing rewards for healthy behaviours

TTM – SELF EFFICACY

[PG 75-76]

Self Efficacy is the Self Belief that someone can successfully perform a given behavior.

In the exercise context, is the belief in one's own capabilities to successfully engage in exercise program.

TTM – DECISIONAL BALANCE

Instructions:

- Work with the client to document the gains and potential losses that he or she might experience when making a lifestyle change.
- Identify and list the recommended implementation strategies needed to achieve the gains and list coping strategies that can be used to deal with the potential losses or obstacles associated with the change.

DECISIONAL BALANCE WORKSHEET

Perceived gains associated with adopting desired behaviors	Perceived losses associated with adopting desired behaviors
1. _____	1. _____
2. _____	2. _____
3. _____	3. _____
4. _____	4. _____
Strategies to maximize potential for achieving gains	Strategies to minimize potential of perceived losses
1. _____	1. _____
2. _____	2. _____
3. _____	3. _____
4. _____	4. _____

How to move them forward ?

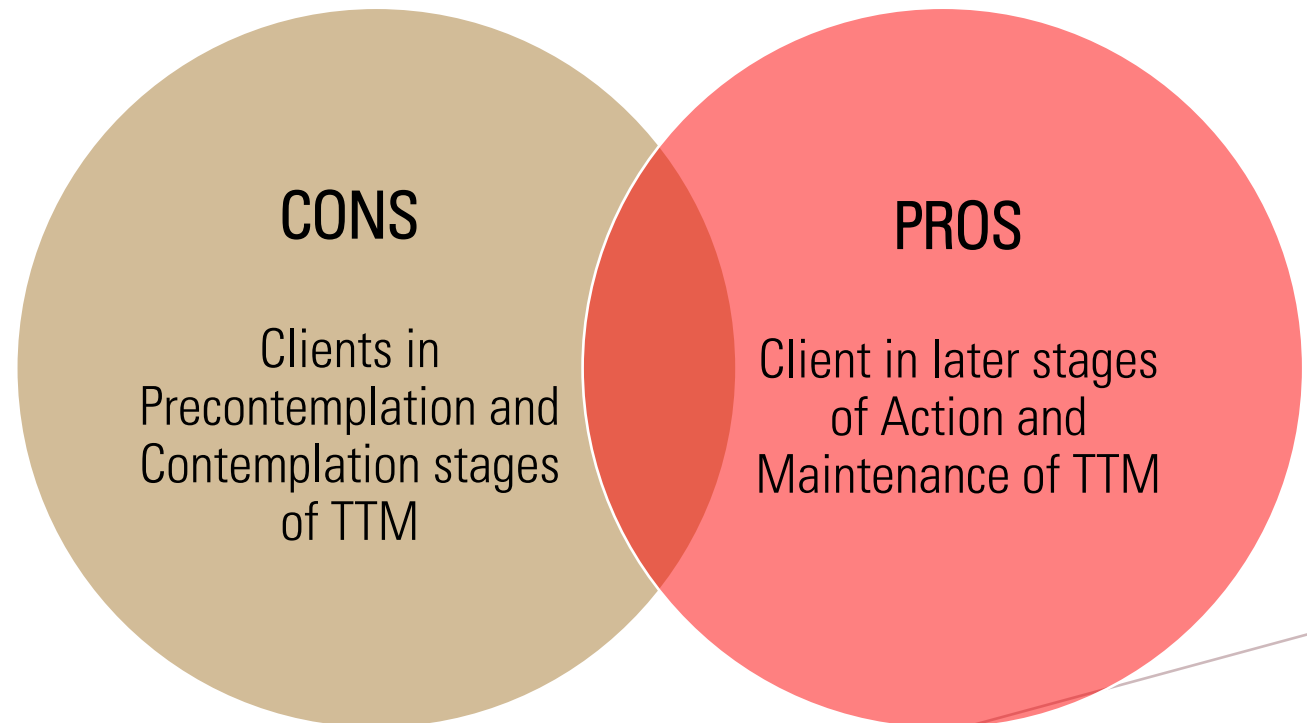

Figure 3-4: Decisional balance worksheet

THE 4 PRINCIPLES OF BEHAVIOUR CHANGE

Operant Conditioning –
Antecedents and Consequences

Cognitions and Behavior –
Replacing Irrational Thoughts

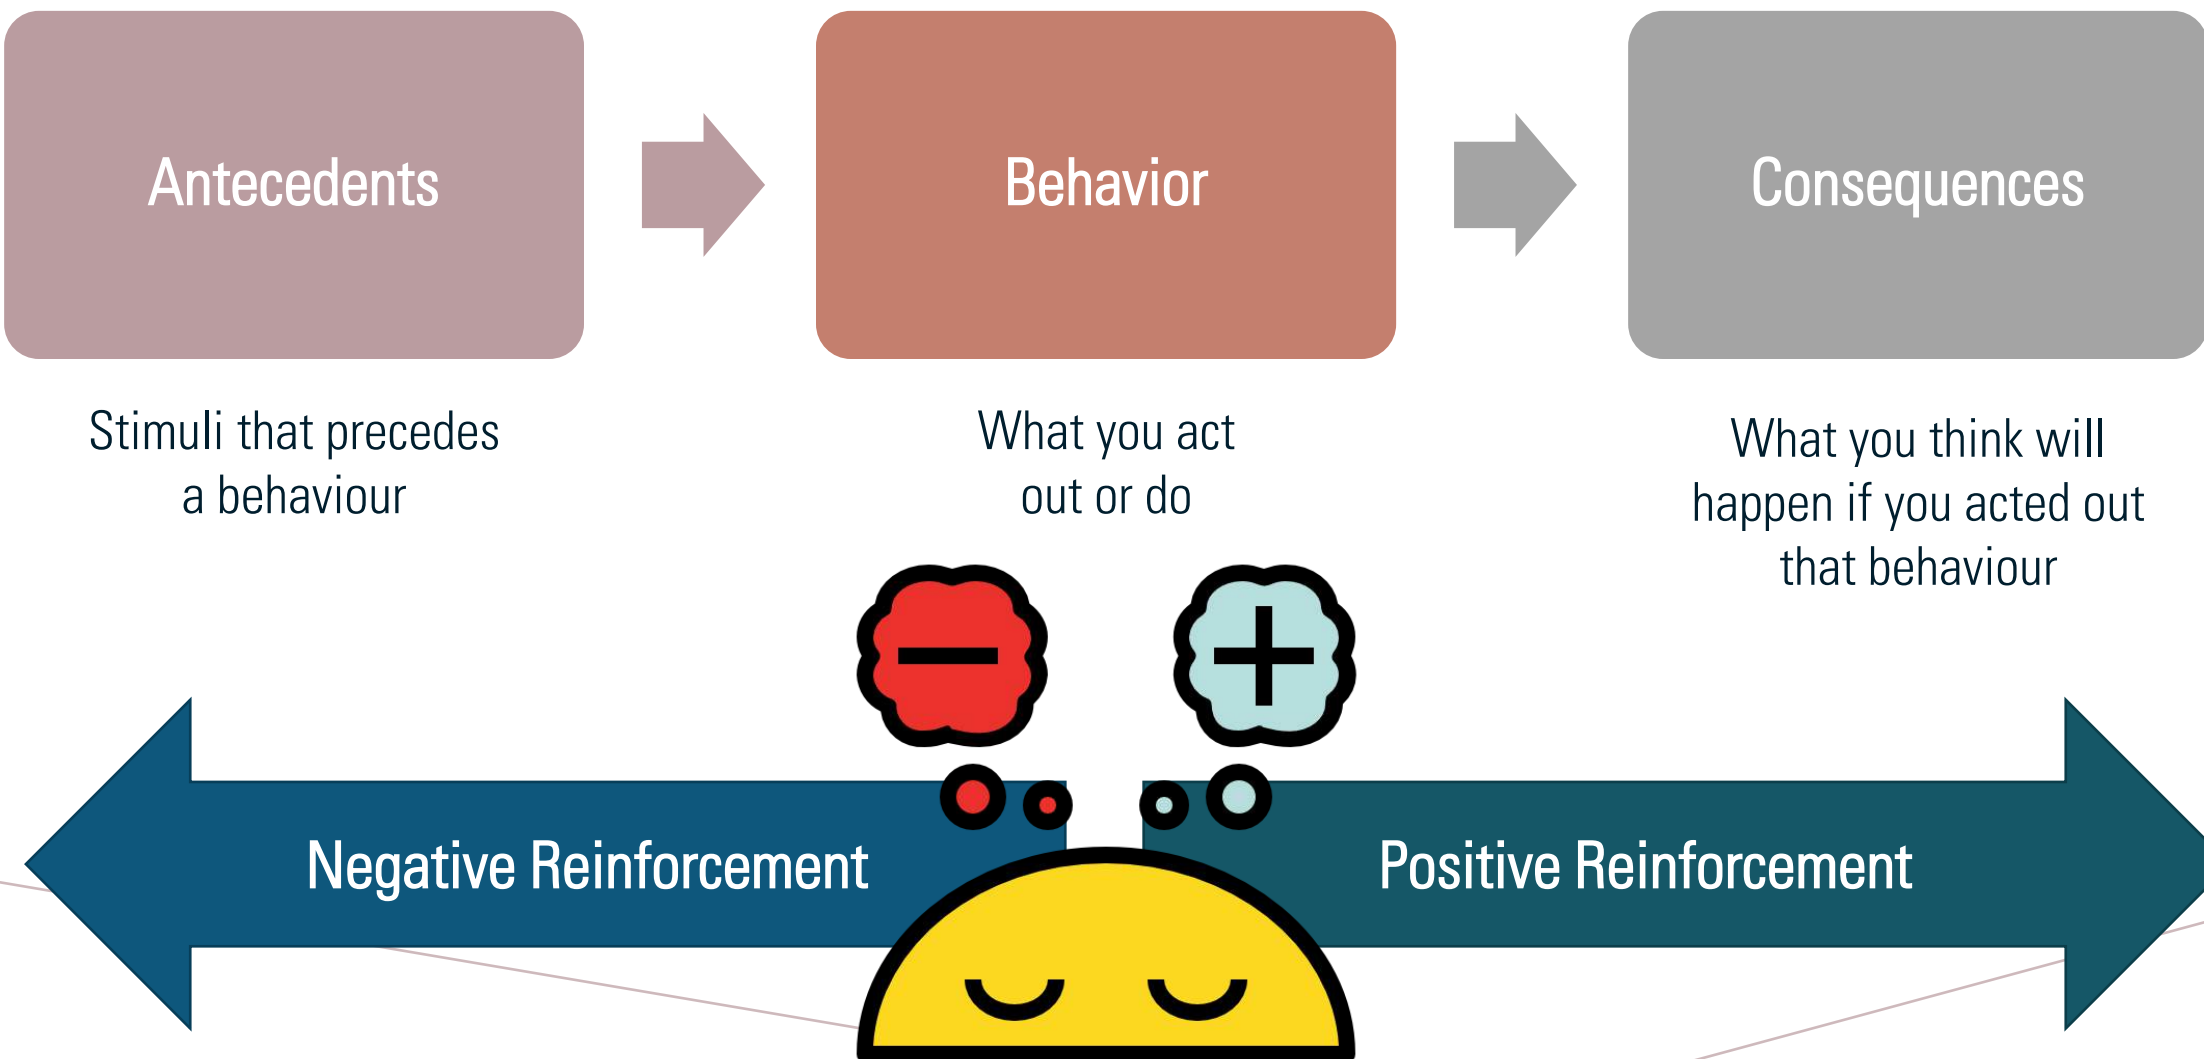

Goal Setting

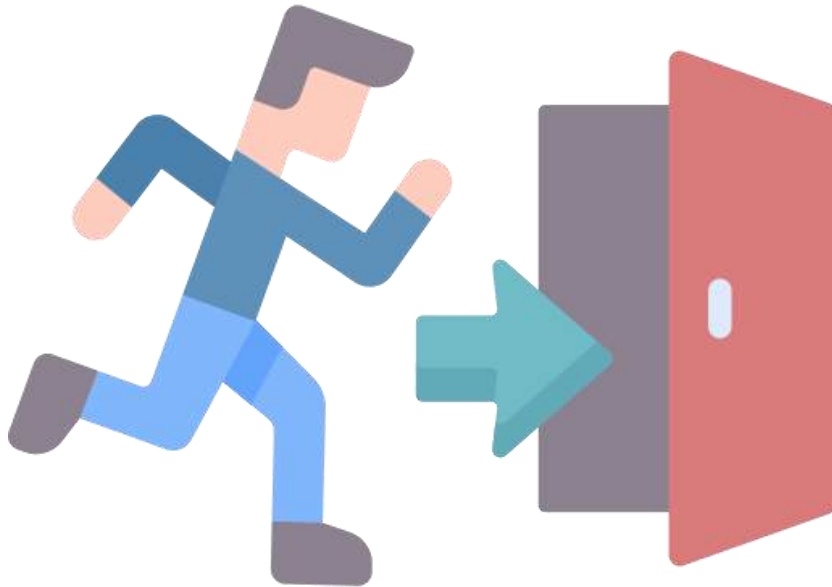

Self Monitoring

1ST BEHAVIOUR CHANGE PRINCIPLE: OPERANT CONDITIONING

ANTECEDENTS

Ineffective Stimuli

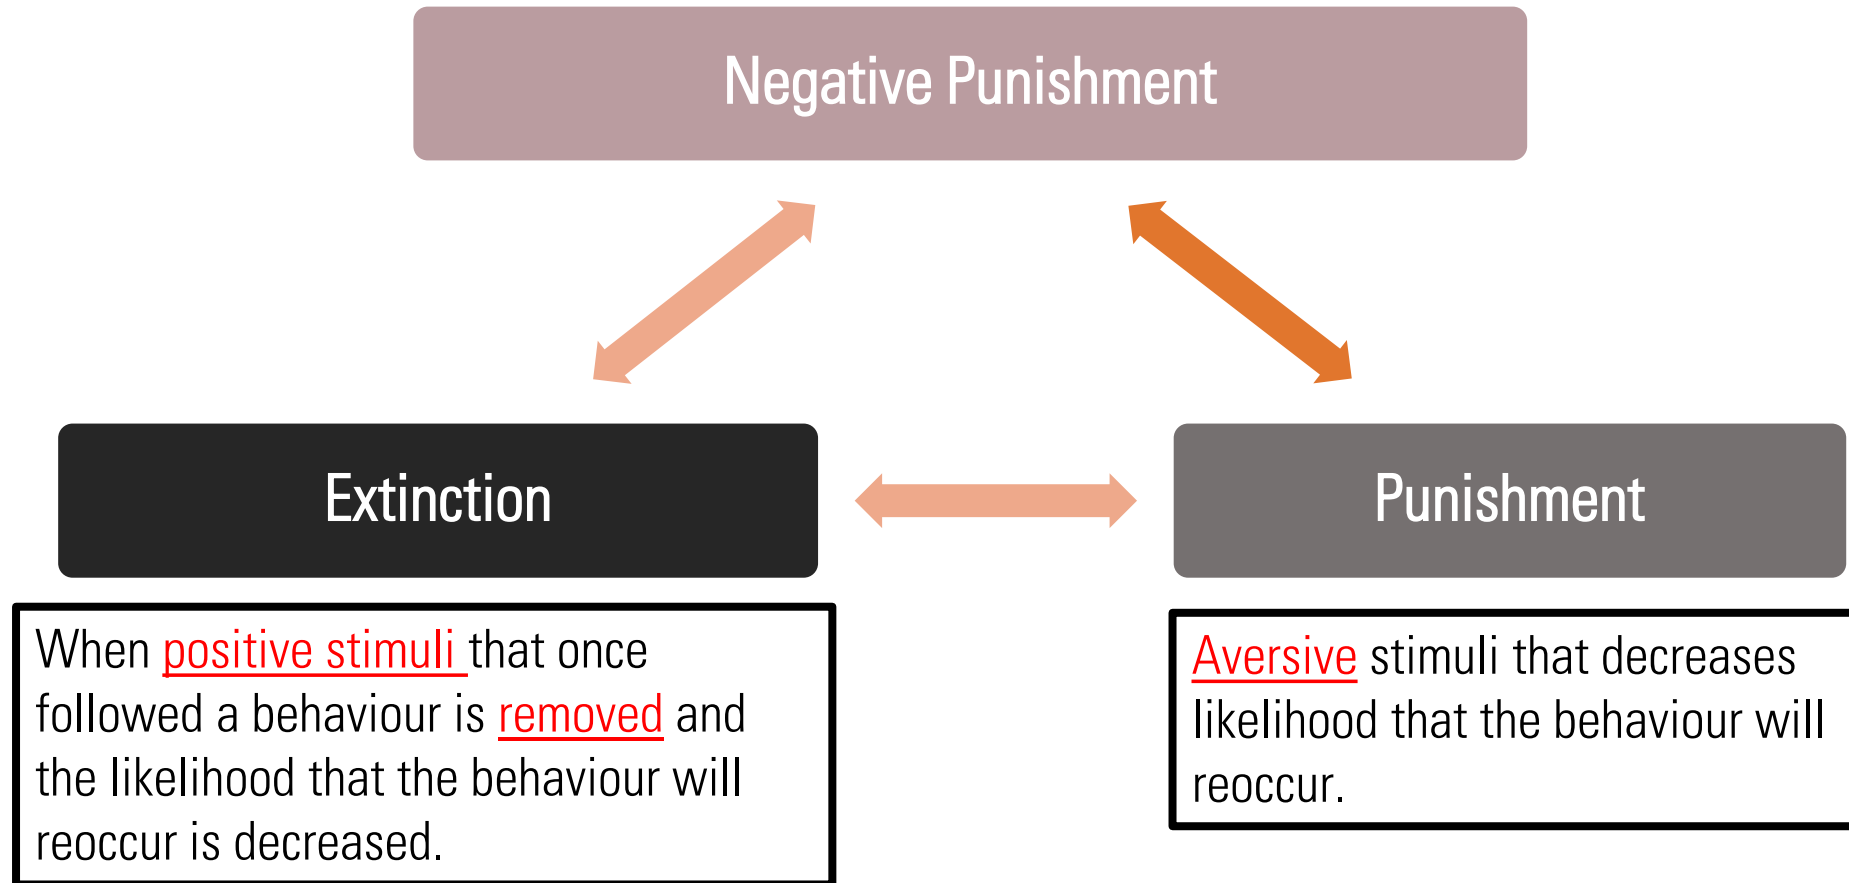

- Looks at clock
- Already late for gym appointment
- Rushes out
- Partially finishes workout

Positive Stimulus
Control

- Sets an alarm 15 minutes
- Triggers him/her to prepare to leave
- Completes full workout session

CONSEQUENCES

COGNITIONS AND BEHAVIOURS

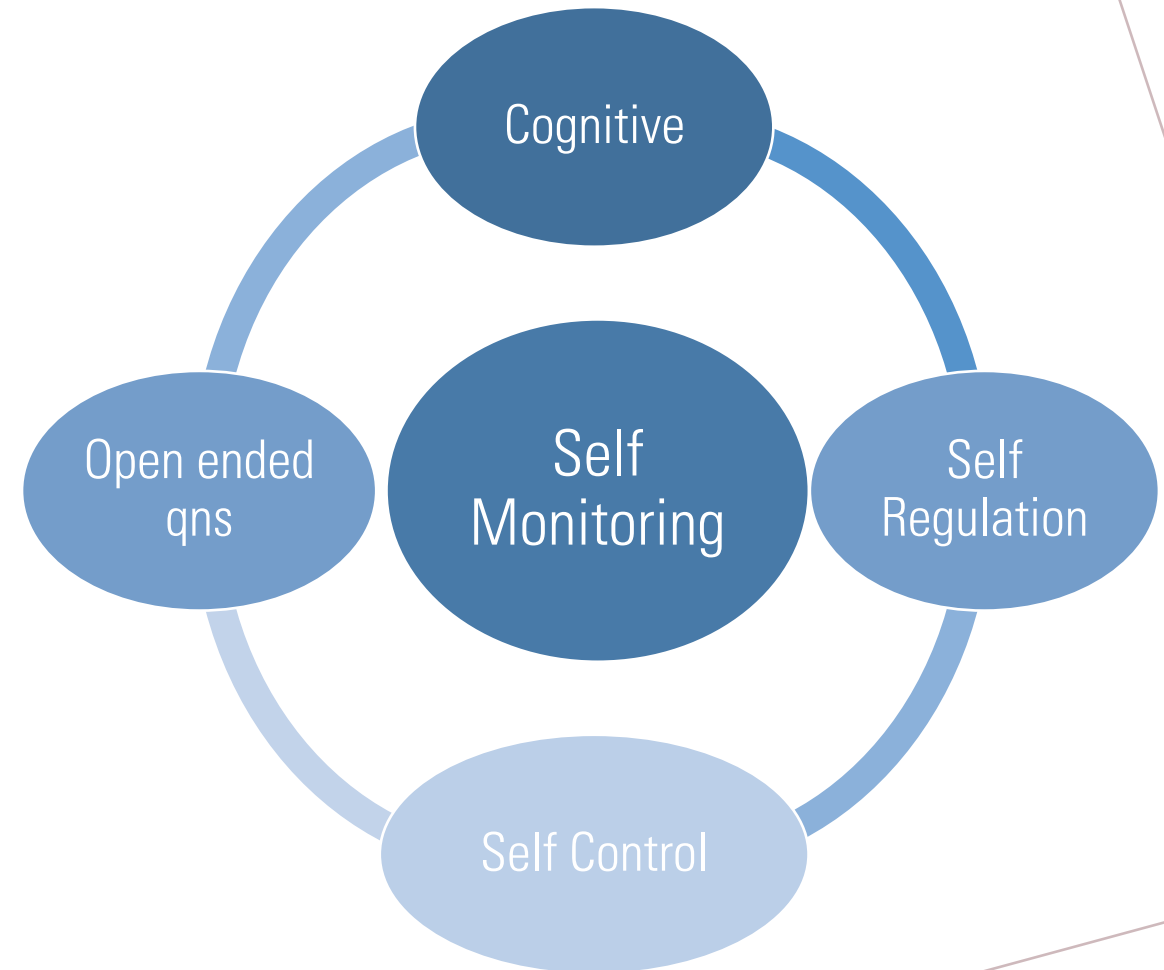

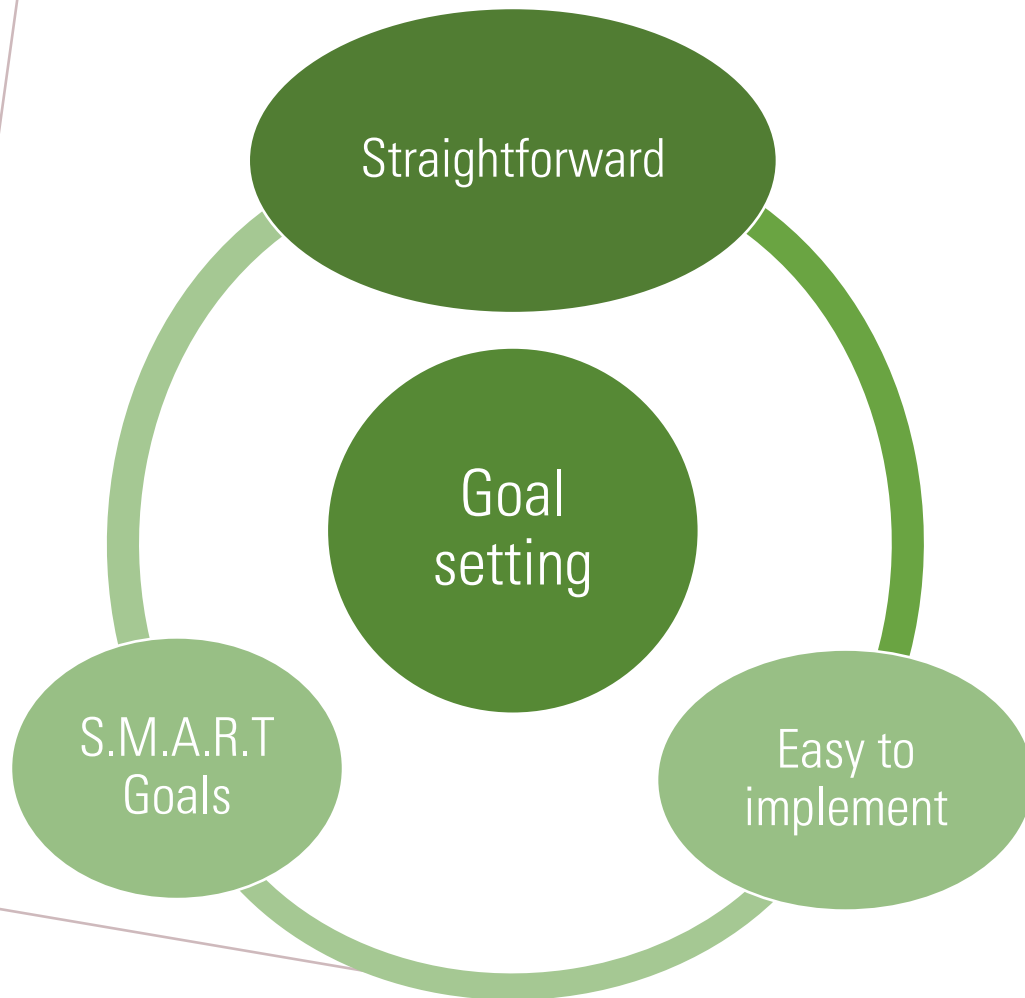

A Personal trainer not only has to know how the **client views** exercise participation, but we should also support clients in becoming **more aware of their thoughts** or cognitions.

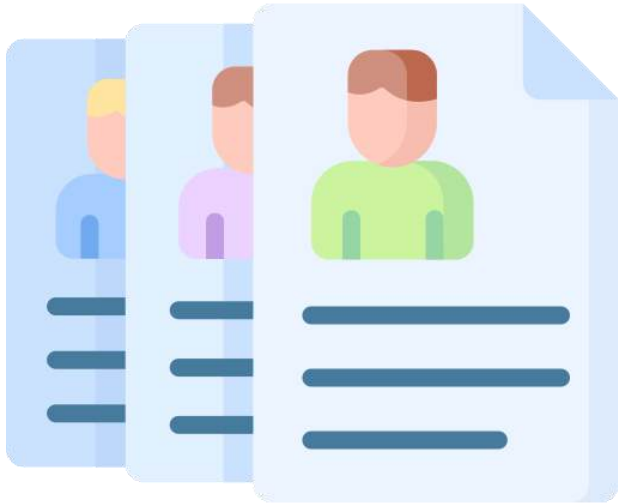

It is important to understand if there are any **irrational thoughts** that deter exercise participation, and this leads to **Cognitions Distortions**.

Figure 3-5: Common cognitive distortions

GOAL SETTING AND SELF MONITORING

PHYSICAL ACTIVITY AND ADHERENCE

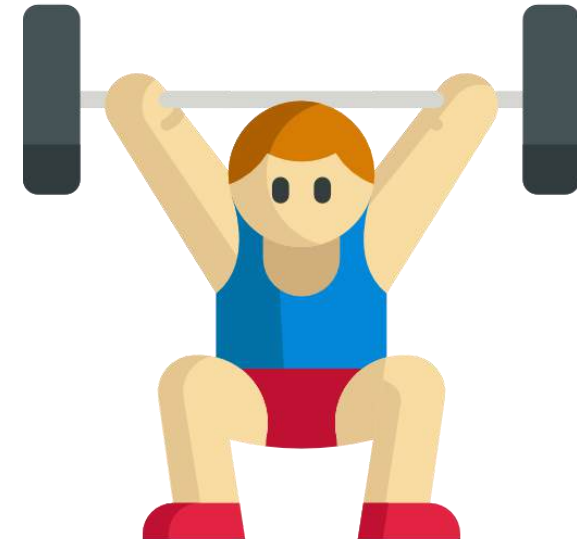

Personal Attributes

- Demographics
- Health Status
- Physical-Activity History
- Psychological Traits
- Knowledge, Attitude & Beliefs

Environment

- Access to Facility
- Time
- Social Support

Physical Activity Factors

- Intensity
- Injury
